

### Quick Conferences

Starting an IceWarp Conference takes on average **5 click less** than using a competitor's tool – we counted it. Imagine how much time it saves you in a year.

### Neverending updates

With IceWarp, you only need a browser because we take care of all the updates behind the curtain. So the **product is always up to date**, but you don't have to waste time updating it.

### Peak efficiency

Work from home, work on the train, work on your phone, work from a submarine, plane, beach... you can even work at your wedding. The point is that you can finally **work from anywhere** you'd like.

### What are we?

A Czech alternative to M365 or GSuite with a global reach.

### How long we've been a thing?

Since 2001.

### Where we can store your data?

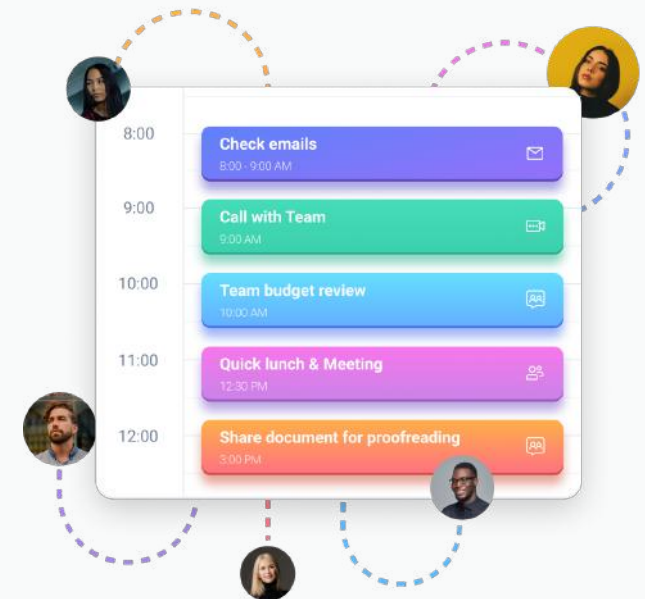

Everywhere, because we cater to the needs of our clients. For example, one data center is located right here in Germany.

### Who are our customers?

Globally recognized brands like Maersk, Ford, or Swiss Post rely on IceWarp. We also have local customers like Madeta, Oresi, or Okay.

# The only office rule is, there is no office.

Find the best alternative to M365 & GSuite.

## Dashboard

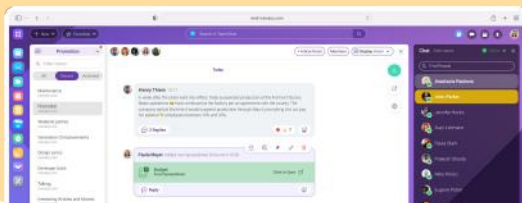

Basically a virtual town square, where you'll spend most of your day. It only takes one click to get to your emails, files, calendar, meetings, lunch orders, or cat videos.

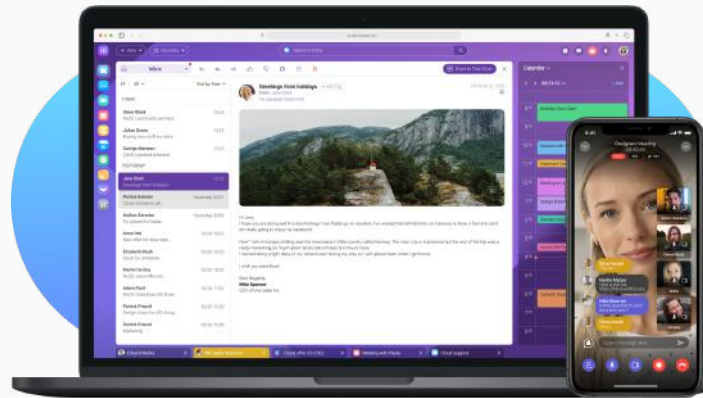

## TeamChat

If Dashboard is the town square, then TeamChat is the local tavern. It's a place for discussing work with your colleagues, brewing super-important plans, and even for keeping track of recent company gossip.

# What you'll find in the IceWarp virtual office.

## Email

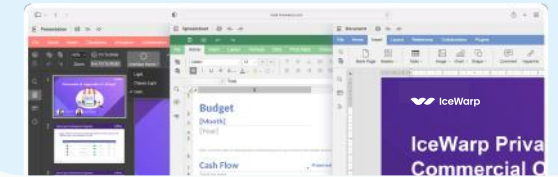

This is the cornerstone of everything in IceWarp. In addition to all the usual email features like folders, flags, rules and spam filtering, you can share messages straight to TeamChat and easily send large attachments with Smart Attach.

## Documents

Do you remember the old archives, where you could never find what you were looking for? Well, Documents is a similar black hole but with a Search function!

## Calendar

Where would modern humans be without a planning tool, right?

## Conferences

Jamming up to a thousand people in one room is never a good idea. So organize a virtual conference instead. It'll be way easier to moderate, and you can always switch off the camera if you get the jitters.
